Managing Security of the IT Infrastructure October 2018

Code of Basic IT Security Management Practices

Overview

SecureTheVillage's *Code of Basic IT Information Security Management Practices* supports our mission of a *CyberSecure Los Angeles.*

The *Code* is designed to meet one of the most pervasive challenges we face in securing our organizations' sensitive and critical information: The often wide gap — the all too frequent language barrier — between an IT organization and the executive to whom the IT function reports. Too often this gap results in basic information security management security practices not being followed. The result is increased vulnerability to cybercrime and other kinds of cyber-risk.

The *Code* describes those *basic few* that are most necessary in preventing cybercrime and other cyber incidents. It's designed to provide the greatest gain for the buck in protecting the IT network. It's also designed so that if you leave anything out, your cyber risk goes up significantly. Think of the *Code* as the 20% of expenditures that gives you 80% of the value.
